

Health and Social Care Network The start of your KCOM journey

HSCN brings an opportunity to create a robust IT infrastructure that will keep you delivering the best outcomes for the people you serve. Here's how:

Phase 1

Underpin HSCN with a reliable network

Optimise the bandwidth at each site, based on business need and cost-efficiency, with mobile failover and proactive network monitoring for 100% peace of mind.

Open up your network with Wi-Fi

Let different users access your network in different ways, creating an 'always-connected' environment.

Phase 2

Stay in touch with hosted voice

Moving to hosted platforms for your voice needs provides clarity, flexibility and cost savings.

Cloud access, the moment you need it

Direct, uncontended access to your hosted platforms, for speed, security and reliability when you need it most.

Reliable data and application access

Safe, flexible Hybrid hosting using Microsoft Azure, AWS and Google Cloud alongside our own UK-based data centres.

Work smarter, anytime, anywhere

As a Microsoft Cloud Solution Provider, we can help you integrate Office 365 into your organisation.

Phase 3

More network control with SD-WAN

Control, resilience and security, all easily configured via the cloud; a 21st Century network with performance and service at its heart.

HSCN connectivity to the public cloud

Securely access public cloud providers (e.g. AWS and Microsoft Azure) to leverage the associated cost and operational benefits.

Become a truly mobile workforce

Our evolving Mobility services provide applications and devices that make sure you can access whatever you need, wherever you happen to be.

Whatever the needs of your organisation, we're here as a trusted partner to advise and help you embrace the power of technology to become more successful.
